McDonald Conference for Leaders of Character  
21 - 24 March 2019  
West Point, New York

# Leading with Character in a Technology Driven World

Our world, our organizations, and OUR interactions with others continue to be shaped by evolving technology. We are interested in discussing how technology has impacted leadership – we will explore this impact through the study of: Making Decisions in a Crisis, Developing Character, and Leading Innovation.

## Panel 1: Making Decisions in a Crisis

Leaders make decisions – often in times of crisis. How has technology impacted a leader's ability to make decisions? How can leaders leverage technology to make better decisions? Are there (or should there be) limits to the use of technology in decision making?

## Panel 2: Developing Character

Technology has the unique ability to both shape and reflect a leader's character. How can leaders of character best leverage technology to develop character in themselves and others?

## Panel 3: Leading Innovation

This panel explores how leaders might leverage technology to establish functional cultures and creative, adaptive, and agile organizations that embrace innovation.
