

How to connect to Eduroam in your MacOS

1. Delete the original Eduroam (from other countries, there could be a problem with various certificates)

Go to wireless network settings and in wifi choose Eduroam and delete it.

Connect again to Eduroam and use login with a domain (Student personal number - 8 digit number)@cuni.cz and password which you set up in CAS under the section other accounts (the password must be different to the password set up for CAS and SIS)

Confirm usage of the certificate
